Angeline Nusalim

angelinenusalim3483@gmail.com | linkedin.com/in/angeline-nusalim

Education

University of Washington Seattle, WA
B.S. in Computer Science – GPA: 3.75 *Sept. 2025 – June 2027*
- **Relevant Coursework:** Data Structures, Systems Programming, Software Design, Parallelism, Hardware/Software Interface, AI, Deep Learning, Computer Security, Data Center, Distributed Systems

Bellevue College Bellevue, WA
Associate in Arts & Sciences (DTA) – GPA: 3.99 *Sept. 2023 – May 2025*

Skills

Languages: Java, Python, C++, C, SQL, JavaScript, HTML/CSS
Frameworks: React, React Native, Node.js
Tools: Docker, Git, GitHub, Maven, Oracle, Kafka, Google Colab, REST APIs
Concepts: Data Structures & Algorithms, Object-Oriented Programming, Multithreading & Parallelism, Distributed Systems, Big Data, ETL & Data Pipelines, Data Warehousing, Machine Learning, Deep Learning, Computer Vision

Experience

AI Data Management Intern — Bank Central Asia | GSIT – IMO HC June 2026 – Aug. 2026
- Shadowing engineers across Data Engineering, Data Analytics, and AI/Data Science teams to learn enterprise-scale data platform architecture supporting high-volume banking systems.
- Completed hands-on training using Java, Maven, Oracle, and enterprise data engineering workflows while learning batch and near real-time (NRT) pipeline architecture.
- Learned enterprise data engineering concepts including ETL, Master Data Management (MDM), data warehousing, data lakes, and data governance within large-scale banking systems.
- Explored artificial intelligence and machine learning workflows, including feature engineering, model development, deep learning, computer vision, and enterprise AI applications within large-scale data platforms.

Full-Stack Web Developer Intern — Rise Above Sports Group | RASG April 2026 – Present
- Built and maintained a full-stack sports platform using HTML, CSS, and JavaScript to support athlete recruitment and organizational content management.
- Designed and implemented responsive user interfaces with reusable components, improving usability across desktop and mobile devices.
- Collaborated with developers using Git and GitHub to implement production features, debug issues, and maintain the application.

Web Developer — BC Hacks 2024 | bchacks.dev Apr. 2024 – Jun. 2024
- Collaborated in an Agile team to build and maintain the official hackathon website serving hundreds of participants.
- Implemented responsive frontend components and dynamic content updates, improving usability, accessibility, and real-time event information delivery.

Projects

AI Quiz Generator | *React, Node.js, Express.js, OpenAI API*
- Developed a full-stack AI-powered quiz generation platform using React, Node.js, and the OpenAI API.
- Designed asynchronous REST APIs to handle AI-generated responses while managing loading states and error recovery.
- Implemented robust API error handling and frontend state management to improve application reliability and responsiveness.

Facial Expression Recognition | *Python, PyTorch, ResNet-50, BiLSTM, Transformer, Google Colab*
- Collaborated with two teammates to develop a video-based facial emotion recognition system using ResNet-50, BiLSTM, and Transformer architectures on the RAVDESS dataset.
- Preprocessed video datasets by extracting facial image sequences with MTCNN, performing actor-based dataset splitting, and training temporal deep learning models in Google Colab.
- Evaluated CNN, CNN+BiLSTM, and Transformer architectures, demonstrating that temporal modeling improved test accuracy from 47.0% to 57.3%.

Smart Credit Card Rewards App | *React Native*
- Built responsive mobile interfaces in React Native using reusable components and scalable application architecture.
- Implemented navigation, state management, and UI updates to enhance user interaction and maintainability.
- Tested, debugged, and optimized the application to ensure consistent performance across devices.

Spell Checker | *C++*
- Implemented a custom hash table in C++ supporting average-case O(1) dictionary lookups.
- Designed collision resolution strategies and analyzed runtime and space complexity for efficient lookup performance.
- Debugged memory-related issues using dynamic memory management techniques, ensuring stable execution and eliminating memory leaks.
